

Focus Bear – First-Time User Experience Testing

As part of this exploratory testing task, I used Focus Bear from the perspective of a brand-new user. I explored different parts of the application, including task creation and management, TOP Score, Brain Dump, Focus Sessions, Focus Music, and habit management.

The goal was not only to check whether the main features worked, but also to identify anything that could be confusing, unclear, frustrating, or potentially affect the overall user experience.

During the exploration, I identified five findings. Some are potential functional issues, while others are usability and UX concerns. I also verified the observed behaviours by repeating certain actions with different tasks and settings to determine whether the behaviour was consistent.

The findings identified during this exploratory session are documented below, together with the observed behaviour, expected behaviour, user impact, and supporting screenshots or recordings.

1. Due Date automatically appears after adding task from to do player. I don't think that it is probably a bug but for a person who struggles with mental disability, ADHD, anxiety, deadlines that are automatically added to their schedule upsets them. It would be better if a person would be given a possibility to choose deadlines for their task.

Preconditions: make sure you have installed focus bear app on your computer

Steps to reproduce:

1. click on the button: "to do player" on app's left sidebar

2. make sure it appears with the following elements:

Focus alignment score: --

Total duration: **00h:11m:19s**

To Do Player To Do List

Let's do this! Add your task here

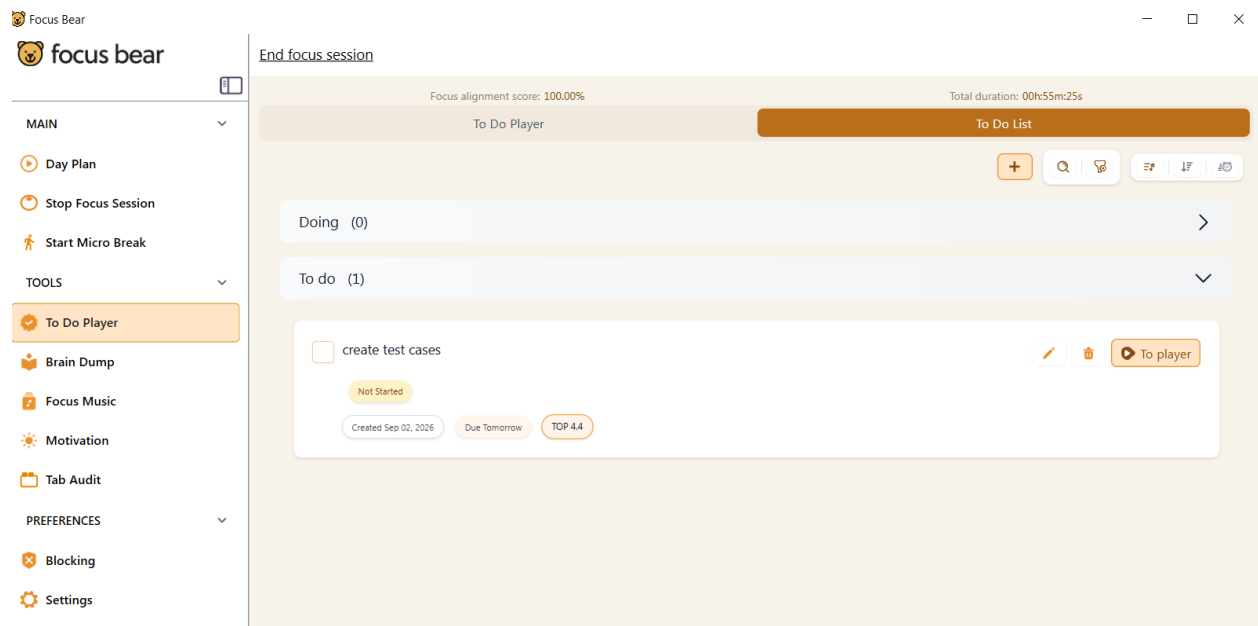

Type your task here

hours
minutes

3.in “type your task here” field type :”create test cases”

4.type 1 : 05 in a “hour minutes” field

Actual result is that task is saved automatically and user can see it on to do list but due date is added automatically even though creating a task never demanded to type due date

2.top score is identical on every task that is created. I tried to create tasks that needed a absolutely different time duration for them to be don, but their top score was always the same.

Preconditions:make sure you have installed focus bear app on your computer

Steps to reproduce:

1.click on the button:”to do player” on app’s left sidebar

2.make sure it appears with the following elements:

Focus alignment score:--

Total duration:**00h:11m:19s**

To Do PlayerTo Do List

Let's do this! Add your task here

Type your task here

hours
minutes

3.in “type your task here” type:create bug report

4.in “hours minutes”field type:23:59

5.click “add task” button

6.in new “type your task here” type:create test case

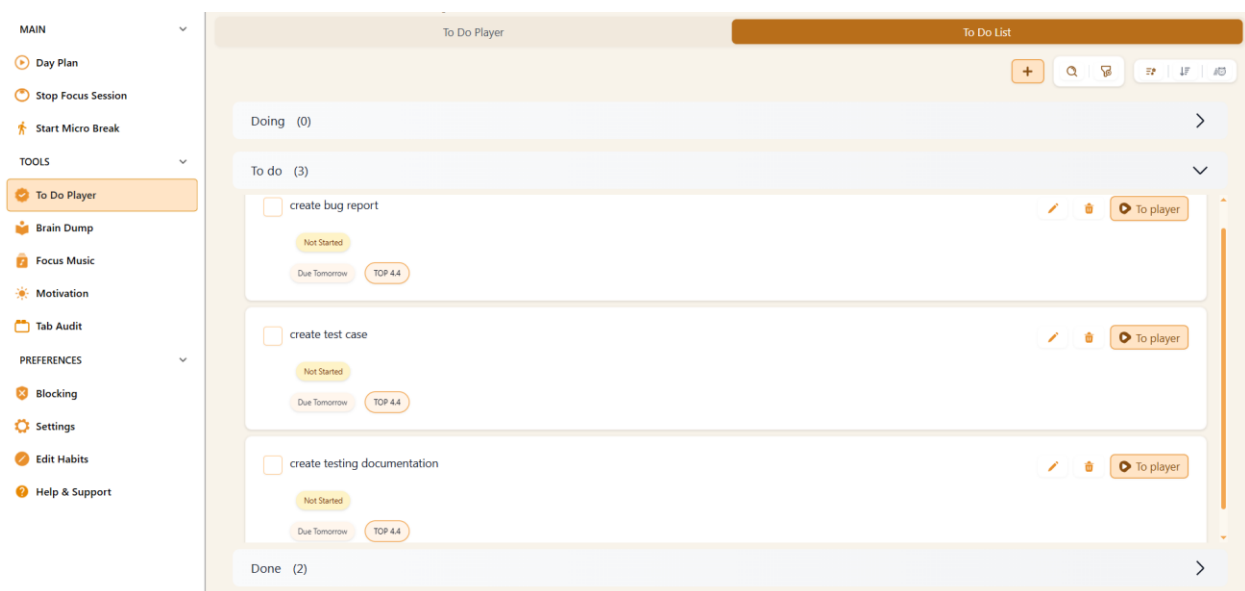

7.in new “hours minutes” field type: 00:01

8.click “add task” button

9.in new “type your task here” type:create testing documentation

10.in new “hours minutes” field type 10:00

Actual result is that top score is added automatically and it is same for any task even though different tasks have different time durations

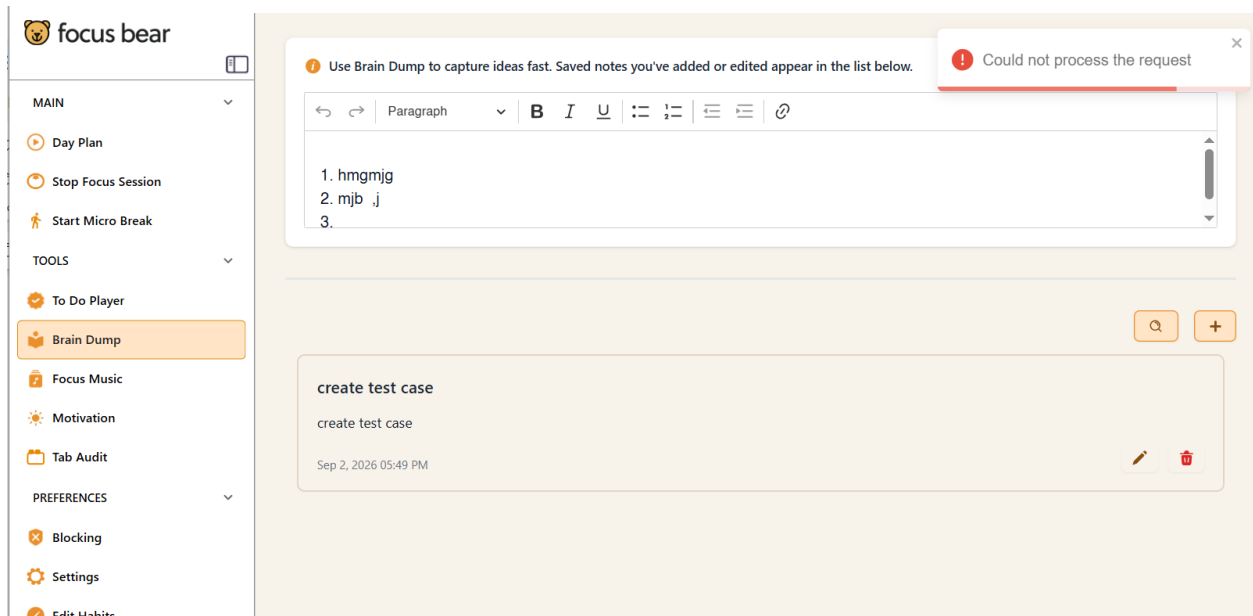

3.after deleting saved notes in brain dump app shows message of successfull deleting but note does not actually deletes

Preconditions:make sure you have installed focus bear app on your computer

Steps to reproduce:

- 1.click “brain dump” button on app’s left sidebar
- 2.click on plus button(adding a note)
- 3.in Title field type create test case
- 4.in write your note here type crate test case
- 5.click save button
- 6.make sure that noote has been added to a braind dump window
- 7.click on bin button under create test case note

Actual result is that after clicking on bin button system shows me a message that note has been deleted but note actually does not go away from app. After tryng to delete it again system shows me message that system could not process this request

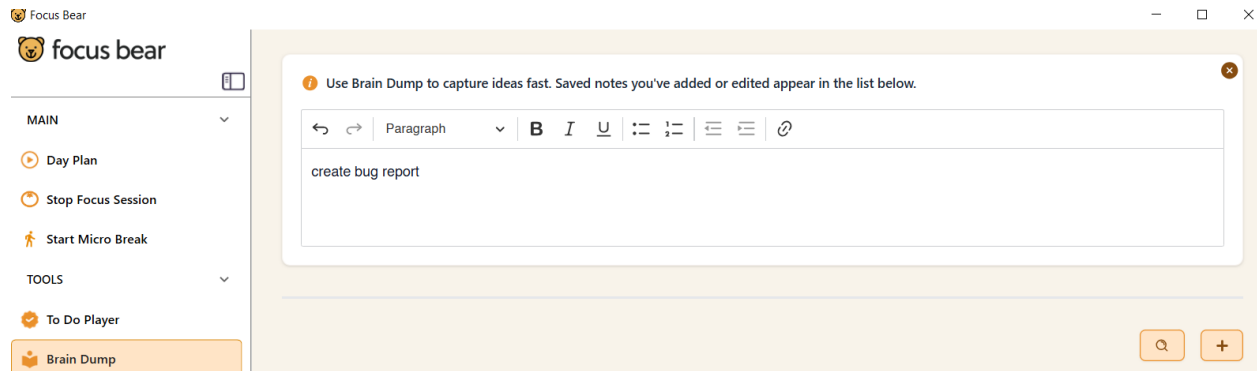

4. after saving a note in brain dump it does not show any message about successful saving

Preconditions: make sure you have installed focus bear app on your computer

Steps to reproduce:

- 1.click on brain dump button on app’s left sidebar
- 2.make sure it apears with the following element: Use Brain Dump to capture ideas fast. Saved notes you've added or edited appear in the list below.
- 3.type in notes field:create bug report

After creating a note app does not give to user a message about saving that note

5.after editing a habit focus bear app starts restarting whivh is really bad for overall user experinece, for example if an user want to add 5 new habits focus bear app needs to be reatsrted for 5 times. Also while i had my focus session on and aldo i was listening to focus music i wanted to edit my habit, when i edited my habit app started restaring, after finishing restart focus session contioniued but not focus music.it would be better if eniting habits does not make app to restart, if there is no problem about restarting than make sure that after restarting my info is saved and i start againg from where i stopped.
